

## Cost of Living Index Analysis (2022)

### Project Overview

This project analyzes the Cost of Living Index 2022 dataset to understand global living expenses, purchasing power, and affordability across countries using Exploratory Data Analysis (EDA).

### Dataset

- Cost of Living Index
- Rent Index
- Groceries Index
- Restaurant Price Index
- Local Purchasing Power Index

### Tools & Technologies

Python, Pandas, NumPy, Matplotlib, Seaborn

### Key Insights

- Strong correlation between cost of living and rent
- High cost does not always mean high purchasing power
- Some low-cost countries offer better affordability

### Conclusion

This analysis helps individuals and organizations make informed economic decisions.
